Technical Memo T71

Re: 69A01.03

To: Customers of the Spiral Hand Weeder
From: Garrett Wade Customer Service

Effective use of this tool will be accomplished by centering the spiral over the root of the weed to be removed, with the tool perpendicular to the ground. Thread the tool rotating clockwise all the way in until the entire spiral is just below the surface. Pull the tool (with the weed) straight out. Try to keep the tool as perpendicular to the ground as you can. Do NOT bend the tool or try to pry or leverage the weed out. In hard, compacted soil or clay, it may be necessary to screw the spiral in and out a few times before attempting to extract the weed.
